Under the observation of the EAI field geologist, a truck-mounted push probe drill rig was brought into position over each selected boring location. Following set-up preparations, the push-probe boring/sampling technique consisted of advancing a plastic lined sampler into the ground. The sampler was then withdrawn and the liner was removed and cut open for examination and transfer of the soil sample to laboratory prepared glassware by EPA Method 5035.

After soil sampling within the borings had been completed and as groundwater was observed in the borings, a temporary well screen was installed in an attempt to sample the groundwater. Small plastic tubing was extended from a peristaltic pump into each well to recover groundwater samples.

Soil and groundwater samples were transferred from the sampler directly to sterilized laboratory prepared glassware which were then stored in an iced chest maintained at approximately 4 degrees centigrade at the site and taken to the laboratory in this condition in an effort to preserve sample integrity.

Each sample container was clearly labeled as to boring and sample number/depth, date, time, project, etc. EPA-recommended sample-management protocol was observed at each stage of the project. During drilling, a field log was made by EAI for each boring. Information recorded versus corresponding depth included soil classification (Unified Soil Classification System), color, texture, relative moisture, odors (if present), etc.

Soil-Vapor Sampling Procedure

Upon reaching depths of between 4 to 5 feet below ground surface (bgs) at location B-6, a soil vapor sample was collected through a temporary screen and casing rod inserted into the ground by the drill rig. The bore hole was sealed around the upper casing rod to inhibit dilution from of atmospheric air in the soil vapor sample. A laboratory-prepared "summa canister" (vacuum cylinder) was then utilized to collect a sample of the subsurface soil-vapor at that locality. Utilizing a flow controller and gauge-vacuum provided by Friedman and Bruya Inc. of Seattle, soil-vapor was collected over a span of five minutes.

Subsurface Conditions

Soils encountered within the borings generally consisted of sands, silty sands, and wood debris. While moisture was observed within the borings at approximately 7 to 9 feet below ground surface (bgs), no recoverable groundwater was encountered until reaching depths of 20 feet bgs or greater. In borings B-3 through B-6, where borings were extended to 25 feet bgs, groundwater rose within the borings up to depths of approximately 5 feet bgs before stabilizing.

LABORATORY ANALYSIS

Laboratory analysis of soil and groundwater samples was conducted by Environmental Service Network (ESN), Olympia, Washington, a WDOE-accredited analytical laboratory. Select soil and groundwater samples were submitted for analysis of gasoline, diesel, and oil petroleum hydrocarbons along with fuel constituents benzene, toluene, ethylbenzene, and xylenes (BTEX). Soil samples selected for analysis were collected from depths where a field screening instrument (photo-ionization detector/PID) indicated detectable vapors. Select groundwater samples were analyzed for volatile organic compounds (VOCs) and MTCA-5 metals including arsenic, cadmium, chromium, lead, and mercury. Laboratory analysis of the soil-vapor sample was conducted by Friedman and Bruya, Inc. of Seattle, Washington. Laboratory analysis was performed on the soil vapor sample for VOCs by EPA Method TO-15 and petroleum (aromatic and aliphatic) hydrocarbons by EPA method MA-APH.

As summarized in Table 1 attached to this report, no petroleum hydrocarbons or BTEX constituents were detected in the soil samples analyzed.

As depicted in Table 2, attached to this report, no petroleum hydrocarbons or BTEX constituents were detected in the groundwater samples analyzed.

As documented in Table 3, of this report, no VOCs were detected in the groundwater samples collected from each boring.

As depicted in Table 4, no detections of cadmium, chromium, lead, or mercury were noted in the groundwater samples analyzed. Dissolved arsenic was detected in each of the three groundwater samples tested with two of those detections at B1 and B5 (5.5 and 7.4 parts per billion/ppb respectively) being above the MTCA Method-A cleanup value for arsenic, currently established at 5 ppb.

Due to the detections of arsenic in groundwater noted above, EAI submitted three (3) soil samples from various depths across the site for analysis of arsenic. As shown in Table 5 attached to this report, no detections of arsenic were found in those samples.

As shown in Table 6 and in the attached laboratory data, various VOCs and APH (aliphatic/aromatic petroleum hydrocarbons) compounds were detected at concentrations below the published MTCA-Method-B screening levels.

CONCLUSIONS

Relying upon the results of limited sampling and laboratory testing documented in this preliminary effort, groundwater at two (2) locations (B1 and B5) contained concentrations (5.5 to 7.4 ppb) of arsenic above MTCA Method-A cleanup limits. No arsenic was detected in soils at those locations indicating that the arsenic may be attributed to a region-wide condition rather than a site specific source.

In attempting to provide some context regarding the arsenic detections in groundwater, information contained in recent publications of the Washington Department of Ecology (March, 2016: *Natural Background Groundwater Arsenic Concentration in Washington State. Ecology Publication No. 14-09-044*) clearly advises that for soils in the Puget Sound Basin (region of Washington in which the subject property is situated), **naturally occurring background** concentrations for arsenic in groundwater have been established at levels ranging from 0.8 to 76 ug/L (or parts per billion). Viewed in that perspective alone, it may be reasonable to consider that the detections of arsenic documented in groundwater beneath the subject property could in fact be a natural background condition not necessarily indicative of a contamination issue for that analyte. If further knowledge is desired by the client regarding these detections, sampling and testing from permanent monitoring wells might provide slightly more "accurate" arsenic concentrations, however no dramatic or substantive changes in results warranting such additional expenditures are presently anticipated.

While no detections of petroleum were found in the groundwater samples collected on-site, at this juncture, we (EAI) simply recommend that the property owner periodically acquire and review cleanup documents and other reports regarding the off-site facilities to the north and west as well as the development work to the east in an effort to learn if any changes in operation or WDOE status of these nearby properties occur.

As an administrative footnote, acknowledging the metallic geophyiscal "anomaly" found on the southwest portion of the property, if during the course of future site redevelopment activity, a tank not discovered during this survey due to such factors as signal loss, inaccessibility, etc., EAI would then simply recommend that such be removed and disposed of in a safe and lawful manner. In such a case, it would be our additional recommendation to collect and analyze selected samples of soils and groundwater to document that environmental conditions at the time of removal are compatible with WDOE cleanup guidelines.

LIMITATIONS

This report has been prepared for the exclusive use of Mr. Kyu Dae Lee along with David Sheean and Associates and their several representatives for specific application to this site. Our work for this project was conducted in a manner consistent with that level of care and skill normally exercised by members of the environmental science profession currently practicing under similar conditions in the area, and in accordance with the terms and conditions set forth in our proposal dated July 26, 2017. The findings and conclusions of this study are based upon the results of laboratory testing of selected samples obtained from separated boring localities and environmental conditions may vary between those locations or at other locations, media, depths, or calender date. No other warranty, expressed or implied, is made. If new information is developed in future site work which may include excavations, borings, studies, etc., Environmental Associates, Inc., must be retained to reevaluate the conclusions of this report and to provide amendments as required.

Dear Mr Zuern:

Included are the results from the testing of material submitted on October 11, 2017 from the Vacant Prop 3309 Pacific Hwy E Fife, PO 36173-2 , F&BI 710256 project. There are 9 pages included in this report.

We appreciate this opportunity to be of service to you and hope you will call if you have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on October 11, 2017 by Friedman & Bruya, Inc. from the Environmental Associates Vacant Prop 3309 Pacific Hwy E Fife, PO 36173-2 , F&BI 710256 project. Samples were logged in under the laboratory ID's listed below.

Laboratory ID	Environmental Associates
710256 -01	B-6

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Analysis For Volatile Compounds By Method MA-APH

Client Sample ID:	B-6	Client:	Environmental Associates
Date Received:	10/11/17	Project:	Vacant Prop 3309 Pacific Hwy E Fife
Date Collected:	10/09/17	Lab ID:	710256-01 1/2.5
Date Analyzed:	10/19/17	Data File:	101911.D
Matrix:	Air	Instrument:	GCMS7
Units:	ug/m3	Operator:	MP

Surrogates:	% Recovery:	Lower Limit:	Upper Limit:

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inbomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

CERTIFICATION

The technical material and data contained in this document were prepared under the supervision and direction of the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the *all appropriate inquiries* in conformance with the standards and practices set forth in 40 CFR Part 312.

EXECUTIVE SUMMARY

Parametrix conducted a Phase I Environmental Site Assessment (ESA) for the Tacoma Dome Link Extension (TDLE) project in conformance with the scope and limitations of American Society of Testing and Materials (ASTM) Standard Practice E 1527-13 (2013) on the subject property identified as Tacoma Dome (TD) properties TD 4435 and TD 4443. Any exceptions to, or deletions from, the Standard Practice are described in Section 1.3 of this report.

The subject property is located at 704 and 716 Puyallup Avenue in Tacoma, Washington, on Pierce County Parcel Identification numbers 2074280010 and 207428002. The subject property is currently owned by Amerco Real Estate Company and operated as a parking lot and drive-thru espresso stand. Monitoring wells, boreholes, and 55-gallon hazardous waste storage drums were observed on the subject property during the site reconnaissance.

The subject property was first developed industrially in the 1890s as a lumber storage yard for the Pacific Lounge and Mattress Company (Carman Manufacturing Company). A dry kiln, sawmill, oil storage, and varnishing warehouse operated on the subject property as part of the facility. Later, the western portion was redeveloped into a gasoline station, operating from 1939 through 1961. The subject property has been primarily a storage lot/parking lot from the 1960s through the present, with an espresso stand developed on the eastern portion in 2003. This assessment has revealed no evidence of recognized environmental conditions (RECs) in connection with the subject property, except for the following:

Recognized Environmental Conditions

The subject property is on the Washington State Department of Ecology (Ecology) Confirmed and Suspected Contaminated Sites List (CSCSL) database, Ecology Voluntary Cleanup Program (VCP) database, facility/site information (ALLSITES) database, and EDR Historical Auto Stations (EDR Hist Auto) database. The listings are related to historical releases of petroleum hydrocarbons from the prior gas station use as well as potential releases of metals related to the historical sawmill/Carman Manufacturing Company. File reviews performed for the subject property indicate soil and groundwater contamination from the subject property historical gas station release extends into the right-of-way of East G Street.

The extent of the release below the subject property and into the right-of-way does not appear to have been fully characterized. Additionally, historical uses related to the sawmill/Carman facility have not been investigated for potential releases. The historical release on and near the subject property and past use of the property are considered RECs to the subject property.

A REC was identified affecting the subject property related to the neighboring property south, which was listed on several regulatory databases. The Spring Air Northwest/Carman Manufacturing Company site is listed due to a historical release from a heating oil Underground Storage Tank (UST). Free product was previously observed below the neighboring site, with contamination migrating north and impacting the subject property. An excavation was performed removing contaminated soils and geomembrane installed to prevent further soil contamination. However, groundwater and potential vapor impacts from the release have not been characterized below the subject property.

Data Gaps

An on-site reconnaissance (within the subject property boundaries) and interview were not conducted with a property representative to identify any potential environmental conditions or to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-13. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

1. INTRODUCTION

Parametrix was retained by Sound Transit to perform a Phase I Environmental Site Assessment (ESA) on the subject property located at 704 and 716 Puyallup Avenue in Tacoma, Washington (Figure 1), as part of the Tacoma Dome Light Rail Extension (TDLE) project. The subject property is identified as Tacoma Dome (TD) parcels IDs TD 4435 and TD 4443, which are on Pierce County parcel numbers 2074280010 and 2074280020. It is our understanding the subject property may be acquired by Sound Transit for the completion of the TDLE project. This Phase I ESA was conducted to support the environmental due diligence related to the acquisition.

The subject property is currently owned by the Amerco Real Estate Company and operates as a vehicle parking/storage lot and an espresso stand in Pierce County, Washington (Figure 2).

This Phase I ESA includes a review of available documentation pertaining to the subject property, a site reconnaissance, and a review of pertinent public agency documents. The ESA consists of two distinct tasks: (1) a review of documents and of oral information, and (2) a site examination. Conclusions and recommendations within this report are based solely on observed evidence and data collected during the performance of this assessment.

1.1 Purpose

The Phase I ESA was conducted in general accordance with American Society for Testing and Materials (ASTM) Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, which defines the generally accepted industry practices and procedures currently applicable at the time and place of this study. The Phase I ESA is intended to permit the user to satisfy the requirements to qualify for the bona fide prospective purchaser limitation under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and, as such, constitutes "all appropriate inquiries in the previous ownership and uses of the property consistent with good commercial or customary practice" as defined by 42 U.S.C. §9601 (35)(B).

The purpose of this Phase I ESA is to identify Recognized Environmental Conditions (RECs) on or near the subject property. The term Recognized Environmental Conditions is defined in ASTM Standard E1527-13 as:

> "…the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any *release* to the *environment*; (2) under conditions indicative of a *release* to the environment; or (3) under conditions that pose a material threat of *release* to the environment. *De minimis conditions* are not *recognized environmental conditions*."

In accordance with ASTM Standard E1527-13, some RECs may be further defined as historical recognized environmental conditions (HRECs) or controlled recognized environmental conditions (CRECs).

An HREC is defined as:

> "…*a past release* of any *hazardous substances* or *petroleum products* that has occurred in connection with the *property* and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the *property* to any required controls."

DRAFT: For internal discussion only. Not reviewed or approved on behalf of any party.

A CREC is defined as:

> "…*a recognized environmental condition* resulting from a past *release of hazardous substances* or *petroleum products* that has been addressed to the satisfaction of the applicable regulatory authority, with *hazardous substances* or *petroleum products* allowed to remain in place subject to the implementation of required controls."

This Phase I ESA endeavors to identify RECs, HRECs, and/or CRECs at the subject property.

1.2 Significant Assumptions

This assessment was conducted in accordance with generally accepted industry practices and procedures within the scope of work authorized at the time and place of this study. Parametrix's observations are limited to those observed from the public right-of-way. No visual reconnaissance was possible inside the buildings on the subject property.

Unless otherwise stated, no other exceptions to the guidelines presented in ASTM E1527-13 were made during completion of this Phase I ESA.

1.3 Limitations

The findings, conclusions, and recommendations presented in this report are based on site conditions and the best available information known or made available by regulators, other consultants, or other sources at the time of the investigation. Parametrix conducted a diligent search and investigation in compliance with prevailing standards of the profession; however, certain adverse conditions may exist at the site but were not detected at the time of the investigation.

The services provided under this contract, as described in this report, include professional opinions and judgments based on data collected. These services have been provided according to generally accepted engineering practices. The opinions and conclusions contained in this report are typically based on information obtained from the following:

- Observations and measurements made by Parametrix field staff
- Contacts and discussions with regulatory agencies and others
- Review of available hazardous substance or solid waste lists
- Opinions and judgments of Parametrix based on the information available

In the professional judgment of Parametrix, the services performed pursuant to the scope of services are an adequate basis to collect data for a preliminary evaluation of the site and upon which to draw the conclusions stated in this report.

2. SUBJECT PROPERTY DESCRIPTION

2.1 Location

The subject property is located at 704 and 716 Puyallup Avenue in Tacoma, Washington, on Pierce County parcel identification numbers 2074280010 (TD 4435) and 2074280020 (TD 4443). The subject property is located within the northeast quarter of the northeast quarter of Section 09, Township 20 North, Range 3 East in Pierce County, Washington (Figure 2), and legally defined as:

Lots 1 To 12, Block 7428; Tacoma Land Company First Addition To Tacoma, According To Plat Filed For Record On July 7, 1884, In The Office Of The County Of Pierce County Washington; Together With The Alley, Vacated By Ordinance No 19338 Of The City Of Tacoma Recorded May 3, 1971 Under Recording No. 2389669, In Pierce County, Washington.

TD 4443 includes Lots 1 through 4, TD 4435 includes Lots 5 through 12.

2.2 Site and Vicinity Characteristics

The subject property is currently owned by the Amerco Real Estate Company and operated as a U-Haul vehicle parking/storage lot and an espresso stand. The subject property is located in a mixed-use area of commercial and industrial properties in the Tacoma Dome neighborhood of Tacoma (Figure 2).

Neighboring properties consist of Tacoma Dome Station parking garage (west), a large warehouse (south), warehouses (east), and the Burlington Northern Santa Fe railroad yard offices and a shipping warehouse (north).

2.3 Physical Setting

The subject property is at an elevation of approximately 15 feet above mean sea level. The topography of the site gently slopes northeasterly towards the Puyallup River and Puyallup basin (USGS 2020). Soils in the area of the subject property are mapped as Alderwood gravelly sandy loam by the U.S. Department of Agriculture (USDA 1955). These are described as moderately well drained. Made land is mapped just north of the subject property. The made land is dredged material that was deposited artificially over marshy tideflats for grading.

The surface geology of the subject property is mapped as artificial fill deposits (Troost, in press). Quaternary Vashon recessional outwash ice contact deposits and Quaternary pre-Fraser age coarse-grained deposits are mapped adjacent south of the subject property. These are described as sand and gravel to silty sand and gravel with some clay portions. These deposits generally have a high porosity and permeability.

A review of well and borehole logs completed below the subject property indicates the subsurface is primarily composed of silty sand with gravels down to 16 feet below ground surface. Water levels have been observed below the subject property between depths of 6 to 10 feet below ground surface. The groundwater gradient below the subject property is primarily north to northwest as displayed on Figure 2.

The nearest surface water body is the Thea Foss Waterway located 1,800 feet northwest of the subject property. The Puyallup River is located 3,800 feet northeast of the subject property.

2.4 Current Use of the Property

The subject property is developed with an asphalt parking lot and a drive-thru espresso stand. The espresso stand is located on the eastern portion of the subject property on TD 4435 which encompasses 0.6 acres. The western portion, TD 4443, is primarily used to store vehicles and encompasses 0.3 acres.

2.5 Descriptions of Improvements on the Subject Property

The espresso stand on TD 4435 encompasses 280 square feet and is surrounded by 24,000 square feet of asphalt parking. TD 4443 is developed with 12,000 square feet of asphalt (Pierce County Assessor-Treasurer 2020). Copies of the Assessor-Treasurers records are attached in Appendix F.

2.6 Environmental Liens

An environmental lien is defined by ASTM as a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, obligation, or duty arising out of response actions, cleanup, or other remediation of hazardous substances or petroleum products. Parametrix reviewed the Pierce County Recorder's database for liens against the current owner. No environmental liens were identified within the recorded documents filed for the current owner of the subject property. Parametrix also reviewed the Washington State Department of Ecology's environmental covenant database. No environmental (restrictive) covenants were filed for the subject property.

A Property History Guarantee title report was supplied by Sound Transit for the subject property (Attached in Appendix A). There are no records in the title summary report indicating activity or use limitations or environmental liens affecting the property. No evidence of activity or use limitations or environmental liens against the subject property were identified during the course of this Phase I ESA.

3. RECORDS REVIEW

The purpose of the records review task was to gather environmental data on the subject property prior to the site examination. The information review consisted of two subtasks: a review of various lists and files published by federal and State of Washington agencies and a compilation of historic uses of the site and site vicinity to determine whether past operations pose an environmental risk to the subject property. Information for agency file review is based, in part, on a report provided by Environmental Data Resources (EDR). The EDR report is included in Appendix B.

The EDR report is a summary of state and federal database searches for sites of possible environmental concern. The information review enabled Parametrix personnel to characterize the types of activities performed at the site, identify data gaps prior to the site examination, and facilitate recognition of discrepancies between reported and observed data. Data gaps identified during the document review were addressed by interviewing Tacoma-Pierce County Health Department personnel, by making observations during the site examination, or by additional detailed investigation of available records.

It should be noted that this information is reported as Parametrix received it from EDR, which in turn reports information as it is provided in various government databases. It is not possible for either Parametrix or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of and reliance on this information is a generally accepted practice in the conduct of environmental due diligence. The following sections present information from the document review.

3.1 Standard Environmental Record Sources

The following section summarizes information collected from records maintained by the U.S. Environmental Protection Agency (EPA) and the Washington State Department of Ecology (Ecology). The information includes details on sites identified in regulatory databases within recommended ASTM search distances. A complete listing of the databases reviewed is included in the EDR Radius Map Report (Appendix B). EDR reported a total of 250 properties with 399 listed conditions within one mile of the subject property. EDR also reported 11 unmappable (orphan) sites in the area of the subject property. Parametrix reviewed the information in the EDR report to screen properties in the vicinity of the subject property for sites with potential to impact the subject property. The screening process involved reviewing the types of listings, types of contaminants, proximity and position relative to the subject property, topography, and groundwater gradient. Listings for sites found in the standard environmental records sources that could not be screened to verify potential impacts to the subject property were further evaluated by file reviews (see Section 4).

3.1.1 Review of Washington State Department of Ecology Databases

The following sections summarize the most relevant information obtained from the EDR Radius Map Report regarding sites identified within the ASTM E1527-13 search radii from the databases listed below. Additional information regarding these sites was reviewed online on the Ecology website to supplement data gaps in the EDR report. A complete listing of the databases reviewed is included in the EDR report. Relevant database listings from Ecology include:

- Ecology Hazardous Site List (HSL)
- Ecology Confirmed and Suspected Contaminated Site List (CSCSL)

- Ecology CSCSL No Further Action (CSCSL NFA) List
- Ecology Solid Waste Facility/Landfill List
- Ecology Leaking Underground Storage Tank (LUST) List
- Ecology Underground Storage Tank (UST) List
- Ecology Aboveground Storage Tank (AST) List
- Ecology Institutional Controls (INST CONTROL) List
- Ecology Voluntary Cleanup Program (VCP) List
- Ecology Interim Cleanup Report (ICR) List
- Ecology and Pollution Liability Insurance Agency Petroleum Technical Assistance Program (PTAP) List
- Ecology Brownfields List
- Ecology Facility/Site Information System (ALLSITES) List
- Ecology Clandestine Drug Lab Contaminated Site (CDL) List and Historical CDL (HIST CDL) List
- Ecology Firefighting Foam Incidents (AQUEOUS FOAM) List and Perfluorinated Contamination Site Location (PFAS) List
- Ecology Reported Spills (SPILLS) List
- Ecology Drycleaners List

3.1.1.1 Ecology HSL, CSCSL, and CSCSL NFA Databases

The Ecology CSCSL database contains sites in Washington State that have been confirmed or have been suspected of contaminant releases and is the state equivalent to the federal Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS). The HSL is a subset of the CSCSL database for sites that have been formally ranked using the Washington Ranking Method. The CSCSL NFA database is former CSCSL sites that have achieved a No Further Action (NFA) determination from Ecology.

The subject property was found on the CSCSL databases.

- The western portion of the subject property (TD 4443) at 704 Puyallup Avenue is listed on the CSCSL database as the Former Texaco Service Station.
- The listing indicates the subject property is impacted with petroleum hydrocarbons and metals above Model Toxics Control Act (MTCA) Method A cleanup levels.
- Based on the EDR listings this represents a REC impacting the subject property. A file review was conducted, and the site is further discussed in Section 4.

Eighty-eight sites within one mile of the subject were reported on the CSCSL database, thirty-eight sites within one mile were reported on the HSL database, and nineteen sites within 0.5 mile were reported

on the CSCSL NFA database. Five CSCSL, one HSL, and four CSCSL NFA sites were reported within 0.125 mile from the subject property:

- Spring Air Northwest/Carman Manufacturing Company at 725 E 25th Street (adjacent south of the subject property) is listed on the CSCSL database. Petroleum hydrocarbons were reported above MTCA Method A cleanup levels. The proximity and position directly upgradient and reported conditions represents a REC to the subject property. Based on the EDR listing, a file review was conducted, and the site is further discussed in Section 4.
- Freighthouse Square at 25th and G Street (adjacent 75 feet southwest across E 25th Street and East G Street) is listed on the CSCSL NFA database. Metals were reported above MTCA Method A cleanup levels and petroleum hydrocarbons were reported remediated below cleanup levels. The site has a No Further Action (NFA) status with Ecology related to institutional controls dating to 2003. Based on the NFA status, this site is not considered a REC to the subject property.
- The Freighthouse Square Amtrak Relocation at 602 E 25th Street (365 feet southwest of the subject property) is listed on the CSCSL database. Petroleum hydrocarbons and polycyclic aromatic hydrocarbons (PAHs) were reported in soil and arsenic in groundwater above MTCA Method A cleanup levels. Cleanup has been initiated at the site. Based on the groundwater results for this property and limited migration reported, this site is not considered a REC to the subject property.
- The Burlington Northern Railroad at 605 Puyallup Avenue (adjacent 220 feet northwest across Puyallup Avenue) is listed on the CSCSL NFA database. Halogenated organics (chlorinated solvents) were suspected above MTCA Method A cleanup levels in soil. The site achieved a NFA status from Ecology in 1996. Based on the downgradient location and NFA status, this site is not considered a REC to the subject property.
- The Mendez Property at 910 Puyallup Avenue (520 feet east of the subject property) is listed on the CSCSL database. Petroleum hydrocarbons were reported above MTCA Method A cleanup levels in soil. The listing indicates cleanup has started for this property. Based on the cross-gradient position, this site is not considered a REC to the subject property.
- The Tacoma Trestle Track & Signal Project (550 feet southeast of the subject property) is listed on the CSCSL database. Petroleum hydrocarbons were reported above MTCA Method A cleanup levels in soil and suspected in groundwater. Based on the EDR listings and proximity, this site is not considered a REC to the subject property.
- Western Beer Distributors at 712 E 26th Street (600 feet south of the subject property) is listed on the CSCSL NFA database. Petroleum hydrocarbons were reported above MTCA Method A cleanup levels in soil and pesticides were reported remediated below cleanup levels. The site achieved an NFA status from Ecology in 1996. Based on the NFA status and distance from the subject property, this site is not considered a REC to the subject property.
- South Sound Radiator at 509 Puyallup Avenue (615 feet northwest of the subject property) is listed on the CSCSL and HSL databases. Petroleum hydrocarbons and non-halogenated solvents were reported above MTCA Method A cleanup levels in soil and suspected in groundwater. The site has an overall hazard ranking of 2 (medium risk). Based on the position downgradient and proximity, this site is not considered a REC to the subject property.

- Precision Pattern Inc at 2620 East G Street (640 feet south of the subject property) is listed on the CSCSL NFA database. Petroleum hydrocarbons were reported remediated below cleanup levels and the site achieved NFA status with Ecology in 2009. Based on the NFA status and proximity, this site is not considered a REC to the subject property.

The remaining listed sites on the CSCSL database, HSL database, and CSCSL NFA database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.2 Ecology LUST, UST, and AST Databases

The Ecology LUST Database List contains an inventory of reported leaking underground storage tank sites from commercial tanks. The Ecology UST database contains registered commercial USTs. Residential heating oil USTs are not included in the Ecology UST database. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). Unless otherwise noted, the presence of USTs near the site does not, in itself, constitute a REC.

The Ecology AST database is listing of aboveground storage tank locations regulated by the Department of Ecology's Spill Prevention, Preparedness and Response Program. Unless otherwise noted, the presence of ASTs near the site does not, in itself, constitute a REC.

The subject property does not have any registered USTs or ASTs within the Ecology database and was not found on the LUST database.

Eleven sites were reported on the UST database within 0.25 mile of the subject property, nineteen sites were reported on the LUST database within 0.5 mile of the subject property, and no AST sites were reported within 0.25 mile of the subject property. Four (seven listings) of these sites were reported within 0.125 mile from the subject property:

- Spring Air Northwest/Carman Manufacturing Company at 725 E 25th Street (adjacent south of the subject property) is listed on the LUST and UST databases. As noted above, this site is also on the CSCSL database related to petroleum hydrocarbons reported above MTCA Method A cleanup levels. The proximity and position directly upgradient and reported conditions represents a REC to the subject property. This site is further discussed in Section 4.
- Superior Cartage of Washington Inc at 805 Puyallup Avenue (adjacent 85 feet northeast across Puyallup Avenue) is listed on the UST database. The site has two reported USTs that have been previously removed. Based on the lack of additional listings and position downgradient of the subject property, this site is not considered a REC to the subject property.
- The Mendez Property at 910 Puyallup Avenue (520 feet east of the subject property) is listed on the UST and LUST databases. As noted above, this site is also listed on the CSCSL database related to petroleum hydrocarbons reported above MTCA Method A cleanup levels in soil. Based on the cross-gradient position, this site is not considered a REC to the subject property.
- Western Beer Distributors at 712 E 26th Street (600 feet south of the subject property) is listed on the UST and LUST databases. As noted above, this site is also listed on the CSCSL NFA database related to the release from the USTs. The site achieved an NFA status from Ecology in 1996. Based on the NFA status, this site is not considered a REC to the subject property.

The remaining listed sites on the UST and LUST databases identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.3 Ecology VCP, PTAP, ICR, INST CONTROL, and Brownfields Databases

The Voluntary Cleanup Program (VCP) database is a list of sites that have been entered into the Ecology voluntary cleanup program and are undergoing cleanup. The Petroleum Technical Assistance Program (PTAP) database is a list of petroleum release sites that have been entered into the Pollution Liability Insurance Agency PTAP program and are undergoing cleanup. The interim cleanup report (ICR) database is a subset of VCP or former VCP sites that have reported interim cleanup actions to Ecology. The institutional control (INST CONTROL) database is a subset of properties with confirmed releases where institutional controls are in place to manage the remaining contamination. The Ecology Brownfields database is a list of abandoned, idle, or underused commercial or industrial properties where redevelopment is limited due to the real or perceived contamination on those properties.

The subject property is identified on the VCP database:

- The western portion of the subject property (TD 4443) is listed on the VCP database related to the release from the Former Texaco Service Station. The regulatory files for the site are further discussed in Section 4.

Nineteen sites within 0.125 mile of the subject property were reported on the VCP database. Three of these sites are within 0.125 mile from the subject property:

- Spring Air Northwest/Carman Manufacturing Company at 725 E 25th Street (adjacent south of the subject property) is listed on the VCP database. As noted above, this site is also on the CSCSL database related to petroleum hydrocarbons reported above MTCA Method A cleanup levels. The proximity and position directly upgradient and reported conditions represents a REC to the subject property. Based on the EDR listings, a file review was conducted and is further discussed in Section 4.
- The Mendez Property at 910 Puyallup Avenue (520 feet east of the subject property) is listed on the VCP database. As noted above, this site is also listed on the CSCSL database related to petroleum hydrocarbons reported above MTCA Method A cleanup levels in soil discovered in 1998. Based on the cross-gradient position, this site is not considered a REC to the subject property.
- Precision Pattern Inc at 2620 East G Street (640 feet south of the subject property) is listed on the VCP database. As noted above, petroleum hydrocarbons were reported remediated below cleanup levels and the site achieved NFA status with Ecology in 2009. Based on the NFA status and proximity, this site is not considered a REC to the subject property.

The remaining listed sites on the VCP database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

One site within 0.5 mile of the subject property was reported on the PTAP database. The site is over 2,000-feet east of the subject property, with no potential to impact the subject property.

Eleven sites within 0.5 mile of the subject property were reported on the ICR database. None are within 0.125 mile from the subject property. The listed sites on the ICR database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

Seven sites within 0.5 mile of the subject property were reported on the INST CONTROL database. One site was reported within 0.125 mile from the subject property:

- Freighthouse Square at 25th and G Street (adjacent 75 feet southwest) is listed on the INST CONTROL database. As noted above, this site is also on the CSCSL database related to metals reported above MTCA Method A cleanup levels and petroleum hydrocarbons were reported remediated below cleanup levels. The site has a No Further Action (NFA) status with Ecology related to institutional controls dating to 2003. Based on the NFA status and Institutional Controls, this site is not considered a REC to the subject property.

The remaining listed sites on the INST CONTROL database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

Two sites within 0.5 mile of the subject property were reported on the Brownfields database:

- American Plating at 2220 East D Street (1,400 feet northwest of the subject property) is listed on the Brownfields database. The listing indicates this site is on several additional databases and has a NFA status from Ecology dating to 2015. Based on the distance relative to the subject property and the reported status, this site is not considered a REC to the subject property.
- Tacoma Redevelopment Property at 1933 Dock Street (2,400 feet northwest of the subject property) is listed on the Brownfields database. This property was partially remediated by excavation, redeveloped, and institutional controls were placed on the property in 2007 related to the contamination remaining in place. Based on the proximity to the subject property and listings, this site is not considered a REC to the subject property.

3.1.1.4 Ecology ALLSITES Database

The Ecology ALLSITES database summarizes sites that likely handle or store hazardous waste in association with the facility/site information system.

The western portion of the subject property is listed on the ALLSITES database:

- This listing is related to the Former Texaco Service Station discussed above. Further discussion on listings for the subject property is presented in Section 4 below.

One hundred and forty-two sites within 0.5 mile of the subject property are reported on the ALLSITES database. Nineteen sites were reported within 0.125 mile of the subject property. Five were identified adjacent to the subject property:

- Spring Air Northwest/Carman Manufacturing Co, adjacent south of the subject property, is listed on the ALLSITES database. Further discussion of the adjacent property south is presented in Section 4 below.
- The Pierce County Transit Tacoma Dome site located at 609 E 25th Street (adjacent west across G Street) is listed on the ALLSITES database. This listing appears related to waste generated or

removed from the adjacent property in 1990s prior to its redevelopment into the current parking garage. Based on the lack of additional listings, this site is not considered a REC to the subject property.

- The Burlington Northern Railroad at 605 Puyallup Avenue (adjacent 220 feet northwest across Puyallup Avenue) is listed on the ALLSITES database. As noted above, this site achieved a NFA status from Ecology in 1996. Based on the downgradient location and NFA status, this site is not considered a REC to the subject property.
- Freighthouse Square at E 25th Street and East G Street (adjacent 75 feet southwest across E 25th Street and East G Street) is listed on the ALLSITES database. As noted above, this site has a NFA status with Ecology related to institutional controls dating to 2003. Based on the NFA status, this site is not considered a REC to the subject property.
- Superior Cartage of Washington Inc at 805 Puyallup Avenue (adjacent 85 feet northeast across Puyallup Avenue) is listed on the ALLSITES database. The listing appears related to the previous removal of USTs from the property as discussed above. Based on the lack of additional listings and its position downgradient of the subject property, this site is not considered a REC to the subject property.

The remaining listed sites on the ALLSITES database identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.1.5 Ecology CDL and HIST CDL Database

The Ecology CDL database tracks Clandestine Drug Labs in the State of Washington or historical (HIST) CDL sites. There were no CDL or HIST CDL sites reported within 0.125 mile of the subject property.

3.1.1.6 Ecology AQUEOUS FOAM, PFAS, and SPILLS Databases

The Ecology AQUEOUS FOAM, PFAS, and SPILLS databases report potential small releases to the subsurface that have the potential to cause contamination. No AQUEOUS FOAM or PFAS sites were reported within 0.5 mile of the subject property. No SPILLS sites were reported within 0.125 mile of the subject property.

3.1.1.7 Ecology Drycleaner Database

The drycleaner database is a listing of former or current drycleaners in Washington. No drycleaners were reported within 0.125 mile of the subject property. No inactive drycleaners were reported within 0.125 mile of the subject property.

3.1.2 EPA Database Review

The EPA administers several programs designed to protect the environment and monitor the generation, storage, treatment, and disposal of hazardous substances. The following sections summarize the most relevant information obtained from the EDR report regarding sites identified within ASTM

1527-13 search radii from the following databases. A complete listing of the databases reviewed is included in the EDR report.

- National Priorities List (NPL)
- Superfund Enterprise Management System (SEMS) List
- Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS) List
- Resource Conservation and Recovery Information System (RCRIS) List
- Emergency Response Notification System (ERNS) List
- US Brownfields List
- Manufactured Gas Plant Sites

3.1.2.1 NPL List

The National Priorities List (NPL) identifies priority hazardous waste sites for remedial actions under the EPA Superfund program. The EDR report indicates that the subject property is not listed as an NPL site. EDR reports no NPL sites were identified within one mile of the subject property; however, there are two related NPL sites that are near the subject property, with one potentially impacting the subject property:

- The Commencement Bay Nearshore Tideflats NPL site (EPA 2020) includes multiple properties within one mile north of the subject property. The site encompasses an active commercial seaport and includes 12 square miles of shallow water, shoreline, and adjacent land due to widespread contamination in water, sediments, and uplands areas. The site was placed on the NPL list in 1983 and is undergoing its fifth five-year review. This NPL site is not known to have impacted the subject property and is not considered a REC for the subject property.
- The Asarco Tacoma Smelter Plume NPL site is a part of the Commencement Bay Nearshore Tideflats NPL site and includes large portions of Pierce, King, Kitsap, and Thurston Counties related to windblown contamination of arsenic and lead deposited from operation of the Asarco Smelter in Ruston, Washington, for a period of nearly 100 years (Ecology 2020c). The area of the subject property is mapped within an area of impact from arsenic of less than 20 parts per million. Based on the mapped concentrations, this represents *de minimis* conditions at concentrations less than MTCA Method A cleanup levels and is not considered a REC to the subject property.

3.1.2.2 SEMS List

The EPA publishes a list of sites that may potentially pose a threat to the environment or the health of the general public. This list is known as the SEMS list (formerly the CERCLIS list). Information contained in the EDR report indicates the subject property is not listed as a SEMS site. Three SEMS sites were identified within one mile of the subject property:

- Supervalu Ammonia Response located at 590 E 19th Street (1,900 feet northwest of the subject property) is listed on the SEMS database. This listing is related to a response that occurred to an ammonia release in 2017 and is not an active threat. Based on the information, this listing is not considered a REC to the subject property.

- The Burlington Northern Railroad site located 1800 feet northeast of the subject property is listed on the SEMS database. This listing is related to historical tar pits related to a former coal gasification plant that operated from the 1920s through 1956. This site is Operable Unit 3 of the Commencement Bay Nearshore Tideflats NPL site and is not considered a REC to the subject property due to ongoing remediation and monitoring and no known impacts to the subject property.
- The Tacoma Spur site located at S 24th Street and A Street (located 2,000 feet west of the subject property) is listed on the SEMS database. This listing is related to carcinogenic polyaromatic hydrocarbon (cPAH) groundwater contamination discovered during construction of Interstate 705 in 1984. This site is part of the Commencement Bay Nearshore Tideflats NPL site. It is not considered a REC based on the distance from the subject property (located over 2,000 feet west).

The EPA also publishes the SEMS-ARCHIVE list, which are SEMS sites that have been designated no further interest under the Federal Superfund Program. One SEMS-ARCHIVE site was reported within 0.5 mile of the subject property:

- The American Plating Co Inc site at 2110 East D Street (located 1400 feet northwest of the subject property) is listed on the SEMS-ARCHIVE list. This listing is related to a former electroplating facility that closed in 1986. Ecology assisted in the cleanup of this property in 2003 and 2012, and, subsequently, a restrictive covenant was placed on the site in 2014. Based on the reported status and position downgradient, this site is not considered a REC to the subject property.

3.1.2.3 CORRACTS Review

The CORRACTS report identifies hazardous waste handlers with corrective action activity. Information contained in the EDR report indicates the subject property is not listed as a CORRACTS site. Two CORRACTS sites are listed within one mile of the subject property:

- The American Plating Co Inc site at 2110 East D Street (located 1400 feet northwest of the subject property) is listed on the CORRACTS database. As noted above, Ecology assisted in the cleanup of this property in 2003 and 2012, and, subsequently, a restrictive covenant was placed on the site in 2014. Based on the reported status and position downgradient, this site is not considered a REC to the subject property.
- The University of Washington Tacoma Branch Campus at 1930 C Street (located 3,400 feet northwest of the subject property) is listed on the CORRACTS database. The listing is related to petroleum hydrocarbons cPAHs, and volatile organic compounds in soil and groundwater below the campus. The site entered an Agreed Order with Ecology in 1997 and is undergoing remediation and monitoring. Based on the distance from the subject property (located 3,400 feet northwest), this site is not considered a REC to the subject property.

3.1.2.4 Resource Conservation and Recovery Information System (RCRIS) List

The RCRIS list includes selective information on sites which generate, transport, store, treat, and/or dispose of hazardous waste as defined by RCRA. Information contained in the EDR report indicates the subject property is not listed as a RCRIS site.

One RCRA generator site is listed within 0.25 mile of the subject property:

- The Caraustar site at 808 E 26th Street (located 650 feet south of the subject property) is listed on the RCRA-VSQG database. This very small quantity generator is a paper recycling facility and listed on the database related to generating ignitable waste. There are some violations reported for the site. However, based on the generator status and proximity, this site is not considered a REC to the subject property.

Fourteen RCRA Non-Generator (NonGen) sites are listed within 0.25 mile of the subject property. Three were reported within 500 feet of the subject property:

- Spring Air Northwest/Carman Manufacturing Co adjacent south of the subject property is listed on the RCRA NonGen database. This appears to be related to environmental investigation on the adjacent property. Further discussion of the adjacent property south is presented in Section 4 below.
- The Sound Transit Tacoma Link Operations Facility at 802 E 25th Street (275 feet southeast of the subject property) is listed on the RCRA NonGen database. The listing appears related to a variety of chemicals used in the repairs and maintenance of the Tacoma Link light rail system. Some violations were reported for this site. However, based on the non-generator status and proximity, this site is not considered a REC to the subject property.
- The Pierce Transit Tacoma Dome parking garage at 609 E 25th Street (adjacent west across East G Street) is listed on the RCRA NonGen database. As noted above, this listing appears related to waste generated or removed from the adjacent property in 1990s prior to redevelopment into the current parking garage. This site is not considered a REC to the subject property.

The EPA also regulates the management of hazardous waste at Transportation, Storage, and Disposal (TSD) facilities. Information contained in the EDR report indicates the subject property is not listed as a RCRA-TSD site. No RCRIS-TSD sites were identified within 0.5 mile of the subject property.

The remaining listed sites on the RCRIS list identified in the EDR report appear to be at sufficient distances from the subject property and/or cleanup activities have been completed so that they do not appear to represent a REC to the subject property.

3.1.2.5 ERNS List

The ERNS is a national database containing information from spill reports made to Federal authorities. Information contained in the EDR report indicates the subject property is not listed as an ERNS site.

3.1.2.6 US Brownfields List

The EPA's US Brownfields list identifies Brownfields properties addressed by Cooperative Agreement Recipients and Brownfields properties addressed by Targeted Brownfields Assessments. The EDR report indicates the subject property is not listed as a US Brownfields site. One US Brownfields site was identified within 0.5 mile of the subject property:

- The American Plating Co Inc site at 2110 – 2130 East D Street (located 1400 feet northwest of the subject property) is listed on the US Brownfields database. As noted above, Ecology assisted in the cleanup of this property in 2003 and 2012 and subsequently a restrictive covenant was

placed on the site in 2014. Based on the reported status and position downgradient, this site is not considered a REC to the subject property.

3.1.3 EDR Databases

3.1.3.1 Manufactured Gas List

Former manufactured gas plant (coal gas) sites are identified on the Manufactured Gas database. Information contained in the EDR report indicates the subject property is not listed as a manufactured gas plant site. Two manufactured gas plant sites are listed within one mile of the subject property. Both appear to be referencing the same property:

- The Tacoma Coal Gasification site at E 22nd Street and A Street (located 2,375 feet west of the subject property) is listed twice on the EDR MGP database. As noted above, this site is also known as the Tacoma Spur property and is included in the Commencement Bay Nearshore Tideflats Superfund site. Based on the status within the NPL and proximity, this site is not considered a REC to the subject property.

3.1.3.2 Historical Auto Stations

Historical auto stations are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates the subject property is listed as a historical auto station:

- Bill's Mobile Service Gas Station at 702 Puyallup Avenue is listed on the EDR Hist Auto database. This is the former gas station on the western portion of the subject property. The listing indicates the subject property was a gas station dating to 1942, 1947, and 1953. Further discussion regarding the gasoline station is discussed in Section 4.

Three historical auto stations are listed within 0.125 mile of the subject property. Two appear to be referencing the same property:

- Standard Stations Inc at 624 Puyallup Avenue (adjacent Tacoma Dome Station parking garage west across East G Street) is listed on the EDR Hist Auto database. The listing indicates this site was a gasoline station in 1965. As noted above, this site had noted excavation and removal of waste in other databases dating to the 1990s. Based on the lack of additional listings and its position cross-gradient from the subject property, this site is not considered a REC to the subject property.
- The Tacoma Super Service No 1 Gas Station site and Automotive Performance Center at 910-914 Puyallup Avenue (located 500 feet east of the subject property) are listed on the EDR Hist Auto database. The gas station was listed dating from 1942 through 1987. The auto repair was listed dating from 1971 through 1996. Based on the position cross-gradient from the subject property and proximity, this site is not considered a REC to the subject property.

3.1.3.3 Historical Cleaners

Historical cleaners are identified on a proprietary database maintained by EDR. Information contained in the EDR report indicates that there are no historical cleaner sites within 0.125 mile of the subject property.

3.1.4 Orphan Site List

Orphan sites are sites for which mapping information is not detailed adequately to plot the location of the site. There are eleven orphan sites listed in the EDR database. The orphan site list and available mapping information were reviewed by Parametrix. None of the orphan sites were found within 0.125 mile from the subject property and none represent RECs to the subject property.

3.1.5 Vapor Encroachment

ASTM Standard E1527-13 defines vapor migration as "the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface." The recognition of vapor migration as a possible REC may require incorporation of new types of controls and restrictions to address this contamination pathway.

The subject property and adjacent sites were reviewed in an effort to determine if vapor migration has, or has the potential to have, occurred at the site, from adjacent properties. Based on the information reviewed, the subject property is identified as a potential vapor intrusion site related to the historical gasoline station use. Further discussion is presented in Section 4.

3.2 Historical Use Information

The objective of the historical use information review is to develop a history of the previous uses of the subject property and surrounding area that helps to identify the likelihood of past uses having led to RECs in connection with the subject property. Parametrix researched the historical land use, occupancy, and ownership of the subject property and adjacent properties to evaluate historical uses that are known to be associated with RECs. Historical records reviewed include Sanborn Fire Insurance Maps, aerial photographs, topographic maps, city directories, and local agency records.

3.2.1 Sanborn Map Fire Insurance Map Review

Parametrix reviewed Sanborn Fire Insurance maps from EDR in an effort to help identify past land uses. A copy of the Certified Sanborn Map Report is included in Appendix C. Maps were available for 1896, 1912, 1950, and 1963. Observations from the Sanborn Maps are listed below.

1896 The subject property is developed with a woodshed and lumber storage yard. The Pacific Match Company and Pacific Lounge and Mattress Company manufacturing plants are located adjacent south of the subject property.

1912 The subject property appears developed as a lumber mill as part of the Carman Manufacturing Company. The main sawmill is located on the northwest corner of the property with an adjacent dry kiln and lumber sheds and storage are to the south and east. The easternmost portion includes an oil house and varnish storage and a furniture warehouse. The adjacent property south is developed as the main portion of the Carman Manufacturing Company Furniture and Mattress Factory.

1950 The subject property appears redeveloped with a gasoline and auto service station on the western portion of the subject property. The eastern portion appears remaining developed as part of the Carman Manufacturing Company sawmill. The neighboring property west appears as a gasoline station.

1963 The subject property appears developed with the gas station on the western portion. The central portion appears used as parking and the eastern portion is developed with the Carman Manufacturing Company shipping warehouse.

3.2.2 Historical Aerial Photograph Review

Historical aerial photographs (aerials) of the subject property area were obtained from EDR. Additional aerials, available from the Pierce County GIS mapping program (Pierce County 2020) and the City of Tacoma GIS mapping program (City of Tacoma 2020a), were reviewed. Aerial photographs for the years 1931, 1940, 1945, 1950, 1957, 1968, 1970, 1972-73, 1980, 1985, 1990, 1995, 2002, 2005, 2009, 2015, and 2018 were examined. Copies of the aerial photographs from EDR are included in Appendix D. Observations are listed below.

1931 The subject property appears developed with a sawmill with lumber storage across much of the property. The neighboring property south appears as a large warehouse.

1940 -1957 The western portion of the subject property appears redeveloped with a gasoline station. The eastern portion appears as a storage lot and warehouse.

1968 The gas station remains on the western portion. The warehouse on the eastern portion is no longer visible and the area appears paved.

1970-1973 The gas station is no longer present. The subject property appears as a vacant paved lot.

1980-2002 The subject property appears used as an equipment storage and vehicle storage lot. A shed appears visible on the eastern portion.

2005-2018 The subject property appears developed in its current configuration. The western portion is used as a vehicle storage lot and the eastern portion is developed with a drive-thru espresso stand.

3.2.3 Historical Topographic Maps

Historical topographic maps of the subject property area were reviewed from the U.S. Geological Survey (USGS). The subject property is located on the Tacoma south 7.5-minute Quadrangle. Maps were available for years 1941, 1961, 1997, 2011, 2014, 2017, and 2020. Observations are listed below.

1941 The subject property appears within the City of Tacoma. A main roadway is present along G Street and turning along Puyallup Avenue.

1961 Two buildings appear developed on the subject property with a portion of a third along the eastern portion of the subject property.

1997 The subject property appears vacant.

2011 -2020 The subject property appears developed in its current configuration.

3.2.4 Local Agency Records

Information from local agencies was reviewed for environmental significance as described in the following sections.

3.2.4.1 Tacoma Permit Records

Available historical City of Tacoma permit records (City of Tacoma 2020b) were reviewed for the subject property. Copies of the permit records are attached in Appendix F. Below is a summary of the permits:

- A service station was constructed on the subject property and an older building was demolished in 1939.
- Neon signs were constructed on the western portion of the subject property in 1939, 1950, and 1952, a billboard was constructed in 1952, and another sign was added in 1962.
- The gasoline station was demolished on the eastern portion of the subject property in 1961.
- A lean-to and dry kiln were demolished in 1962.
- A Carman warehouse was demolished on the eastern portion of the subject property in 1965.
- A drive thru espresso stand was constructed on the eastern portion of the subject property in 2003.

3.2.4.2 Tacoma Public Library

The Tacoma Public Library Northwest Room has online databases for historical photographs and a historical building index:

- One historical image of the neighboring Standard Oil Service Station at 624 Puyallup Avenue was identified dating to 1933.

3.2.5 Summary of Historical Information

Based on the historical review, the subject property was first developed industrially in the 1890s as a lumber storage yard for the Pacific Lounge and Mattress Company (Carman Manufacturing Company). Around 1900, a sawmill and dry kiln were developed on the western portion of the subject property and warehouses, an oil house and varnish storage were developed on the eastern portion. From 1939 through 1961, the western portion was redeveloped into a gasoline station. The eastern portion remained developed as a warehouse through 1965. The subject property was primarily a storage lot from the 1960s through 2002 and developed into its current configuration with an espresso stand in 2003. As noted in Section 4, unresolved RECs remain on the western portion of the subject property. The historical oil house and varnish storage reported on the eastern portion of the subject property do not appear to have been investigated.

The surrounding area has primarily been industrially used since the 1890s. The Carman Manufacturing plant operated south of the subject property through 1999 and has primarily been used as a storage warehouse since that time. The neighboring site west was operated as a gasoline station from the 1930s through the 1960s. Historical use on the adjacent property south has potentially impacted the subject property as noted in Section 4.

3.3 Additional Environmental Information

The following sections provide a summary of additional environmental information obtained for the site.

3.3.1 Asbestos

The manufacture of most asbestos-containing materials was banned by the EPA by 1979. Prior to this, asbestos was a common constituent of numerous building materials, including floor and ceiling tiles, caulking, pipe insulation, roofing materials, and exterior siding.

Based on the age of the building (constructed after 1979), there is low potential for asbestos-containing materials to have been used in the construction of the buildings.

3.3.2 Lead-Based Paint

Before 1977, paint commonly contained lead which is considered to cause human health problems if ingested. Based on the age of the building (constructed after 1977), there is low potential for LBP to have been used in the construction of the building.

3.3.3 Polychlorinated Biphenyls

Transformers can potentially contain polychlorinated biphenyls (PCBs). Based on the age of the building, there is low potential for PCBs to have been used in the construction of the buildings (primarily used in lighting and electrical equipment). However, Parametrix did not inspect the building interior for this assessment.

Radon is a naturally occurring radioactive gas formed by the decay of uranium in some rocks and soil. The adverse health effects associated with radon gas depends upon various factors, such as the concentration of the gas, and exposure duration. The potential concentration of radon gas within a building depends on subsurface soil conditions, the integrity of the building's foundation, the existence of a basement or crawl space (primary areas of concern), and the building's ventilation.

The subject property is located in the Federal EPA Radon Zone 3. The Zone 3 indoor average radon level predicted as less than 2 pCi/L, reported as a low risk of radon elevation. The EPA Action Level for radon is 4 pCi/L. Based on this limited information, radon likely does not represent an environmental concern at the property.

4. FILE REVIEW

In accordance with ASTM Standard E1527-13, inquiries and review of previous investigations for the subject property, and a review of regulatory files for the subject property or adjacent properties may be conducted to further evaluate environmental conditions on the property or adjacent properties, and to fill in data gaps where applicable. Previous investigations and file reviews are summarized below. Copies of available reports are attached in Appendix F.

4.1 Previous Investigations

Ecology files for the subject property were reviewed which include:

- 2006 Phase II ESA completed by Environmental Management Services, LLC
- 2017 Remedial Investigation Report completed by ECI Environmental Services
- 2017 Ecology Voluntary Cleanup Program (VCP) agreement and Application
- 2018 Ecology VCP acceptance Letter
- 2018 Further Action letter from Ecology

The information in the available files indicate in 1998, three USTs were discovered during a geophysical survey during a Phase I ESA and subsequently removed by Environmental Tank Services. Approximately 43 tons of petroleum contaminated soil (PCS) was also excavated and disposed off-site. Confirmation soil samples from the excavation were all reported below laboratory detection levels.

In 2006, Environmental Management Services conducted a Phase II ESA surrounding the historical gas station. Four boreholes were completed to 12 feet below ground surface. Soil and groundwater samples were collected and analyzed for petroleum hydrocarbons, volatile organic compounds, cPAHs, and metals, and compared with MTCA Method A cleanup levels.

Gasoline was found in soil at 200 milligrams per kilogram (mg/kg) above MTCA Method A cleanup levels of 100 mg/kg, and diesel and oil were found in groundwater at 1,700 and 8,600 micrograms per liter (µg/L), respectively, above MTCA Method A cleanup levels of 500 µg/L from one location (B4). Three of the boreholes identified concentrations of lead ranging from 18.7 to 33.8 µg/L above MTCA Method A cleanup levels in groundwater of 15 µg/L. One location identified concentrations of chromium at 52.8 µg/L above MTCA Method A cleanup levels in groundwater of 50 µg/L. Based on the results of the Phase II ESA, Ecology indicated that further remedial actions were necessary at the site.

In 2017, ECI Environmental Services completed a Remedial Investigation of the subject property. Eight boreholes were completed on the subject property to a depth of 12 feet below ground surface. Four of the boreholes were converted to one-inch diameter monitoring wells. Sixteen soil samples and four groundwater samples were submitted for analysis.

The soil results showed levels of gasoline in one sample at a concentration of 1,500 mg/kg above the MTCA Method A cleanup level of 100 mg/kg. Ethylbenzene was detected at a concentration of 11 mg/kg and xylenes at a concentration of 14 mg/kg, slightly exceeding the MTCA Method A cleanup levels of 6 mg/kg and 9 mg/kg, respectively. Additional soil results showed diesel and oil concentrations ranging

from 240 mg/kg to 1,100 mg/kg, below the MTCA Method A cleanup level of 2,000 mg/kg. Concentrations of arsenic, lead, and chromium were reported below MTCA Method A cleanup levels.

The groundwater results showed all four monitoring wells above MTCA Method A cleanup levels for total arsenic of 5 µg/L and one well above MTCA Method A cleanup levels for total chromium of 50 µg/L. The samples were reported below MTCA Method A cleanup levels for dissolved lead but above MTCA Method A cleanup levels for total lead of 15 µg/L. There were no detections of gasoline or oil in the four samples. Low concentrations of diesel were detected in two of the samples at 78 to 120 µg/L below the MTCA cleanup level of 500 µg/L.

Following completion of the RI, the site was entered into the VCP Program and an opinion was requested from Ecology. Ecology indicated further remedial actions were necessary to achieve cleanup status at the subject property:

- Ecology determined the characterization of the site was not sufficient.
- Ecology provided seven specific recommendations for the further characterization of the site relating to determining the nature and extent of contamination on the subject property and adjacent G Street right-of-way.

Based on the available Ecology files, the subject property has unresolved RECs related to the historical use of the property and impacts to soil, groundwater, and vapor migration. Due to the concentrations remaining in soil below the property, vapor intrusion at the site is a possible contaminant exposure pathway. However, there are no buildings on the western portion of the subject property near the historical release (Figure 2).

4.2 Adjacent Properties File Review

Nearby listings identified in the environmental databases are described in Section 3. As noted above, the adjacent site south and upgradient is listed on the CSCSL database. Ecology records reviewed for the neighboring Spring Air Northwest/Carman Manufacturing company property at 725 E 25th Street included a Remedial Investigation work plan completed in 2016.

The Remedial Investigation work plan was completed by ECI Environmental Services. The report indicates the neighboring building was completed around 1891 and indicates the subject property was developed by at least 1896 for lumber/wood storage, part of a sawmill and engine shop and, later, the gasoline station and a restaurant.

In 1986, a 7,000-gallon UST was reported to Ecology related to the boiler room at the manufacturing plant. The 7,000-gallon UST was identified below the building and was closed in place in 1989 by Don Golden Company. One soil sample was collected during the decommissioning and found TPH concentrations at 53.2 mg/kg, below MTCA Method A cleanup levels.

Creative Environmental Technologies Inc (CETI) completed a Phase I ESA and subsequent Phase II ESA of the neighboring property. Three boreholes were advanced near the former boiler and free product was discovered in two of the boreholes. In 1998, CETI performed additional Phase II ESA work at the property and completed 33 boreholes in the boiler area and north of the building, one test pit adjacent to the factory, one temporary monitoring well, and three permanent monitoring wells. Free product was encountered in eight boreholes and groundwater concentrations of diesel up to 41,500 µg/L were

identified, and cPAHs were found above MTCA Method B cleanup levels. The neighboring property was then entered into the Ecology VCP program in 1998.

CETI completed a Cleanup Action Plan in 1998 for removal of contaminated soil outside the building footprint and using a pump and treat system inside the building. CETI excavated 2,804 tons of diesel-contaminated soil from the subject property parking lot and the east side of the adjacent property building. The excavation was reported within a few feet of the building and contamination remained in place, so a geomembrane was installed between the contaminated soil and clean backfill. Figure 2 displays the approximate area of excavation. In 1999, CETI installed the pump and treat system with placement of six recovery wells. Approximately 100 gallons of free product was recovered by the system from 1999 through 2001. The system was then shut off and annual groundwater monitoring was completed by Sound Environmental Strategies through 2007, showing a relatively stable groundwater plume.

In 2006, a Phase I and Phase II ESA of the Spring Air Facility was conducted by Swift Creek Environmental. The Phase II ESA included placement of one borehole and two monitoring wells/piezometers and sampling of two of the existing recovery wells. Results from the two new monitoring wells found concentration of diesel and oil above MTCA Method A cleanup levels. Metals were also detected in samples. As part of the Remedial Investigation workplan (2016), ECI Environmental Services indicated they would sample the wells below the Spring Air property and try to determine the extent of the groundwater contamination. No new boreholes or monitoring wells were proposed. Ecology records and the interview with the Tacoma-Pierce County Health Department (Section 6, below) indicate that the proposed remedial investigation does not appear to have been completed.

Based on the review of the neighboring Ecology files, it appears the subject property was impacted with diesel-range petroleum hydrocarbons from a release from a previously closed 7,000-gallon heating oil UST on the neighboring property south. Remediation of contaminated soil below the subject property was completed; however, the extent of groundwater contamination below the subject property is unknown. This represents an unresolved REC for the subject property. Vapor intrusion assessments were not previously completed related to the release. The unresolved plume also represents a vapor intrusion risk to the subject property. The espresso stand on the subject property is 60 feet north of the neighboring building.

5. SITE EXAMINATION

Parametrix conducted a site examination of the subject property from public right-of-way on November 3, 2020. The site examination consisted of observing the areas immediately surrounding the subject property, providing observations of the general environmental conditions on the subject property, and visually assessing the subject property and adjacent properties for evidence of hazardous materials. Photographs of the subject property taken during the site examination are included in Appendix E.

5.1 Subject Property

The subject property is a parking lot and espresso drive-thru stand in the Tacoma Dome neighborhood of Tacoma, Washington. The parking lot spans the entire length of the property from G Street on the west to H street on the east and, from the neighboring building, south up to Puyallup Avenue. The espresso stand is located on the eastern central portion of the parking lot. The parking lot is currently being used to store U-Haul vehicles. A large pond of pooled stormwater was observed on the western portion of the lot, indicative of a blocked stormwater drain.

Several monitoring wells were observed across the property as well as borehole patches indicative of previous investigations of the site. Several 55-gallon waste storage drums with non-hazardous waste labels were located on the southern central portion of the subject property, indicative of recent investigations. The drums appeared to be in good condition.

No other evidence of USTs, ASTs, or other indications of environmental significance were observed on the subject property. In addition, no evidence of significant storage or spills of hazardous substances and/or petroleum products was observed on the subject property. No evidence of staining, adverse odors, or other indications of potential releases was observed.

5.2 Adjacent Properties

Adjacent properties were observed from the surrounding right-of-way. Monitoring wells were observed on the northeast corner of the neighboring warehouse building to the south of the subject property, indicative of a historical release. Additional warehouse are located across McKinley Avenue E. to the southeast and east, and northeast and northwest across Puyallup Avenue. A shipping/storage yard is located north across Puyallup Avenue. The Tacoma Dome Station parking garage is located adjacent west across East G Street. The area surrounding the subject property has a slight slope northerly, towards the tideflats.

The monitoring wells are indicative of a unresolved historical release impacting the subject property and represent a REC to the subject property. No other potential RECs were identified on neighboring properties with potential to impact the subject property.

6. INTERVIEWS

An interview was not conducted with a property representative to identify any potential environmental conditions or to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview represents a data gap in accordance with ASTM Standard E1527-13.

A user questionnaire was submitted to Sound Transit to assist in identifying potential RECs affecting the site and identification of background information on the subject property. A copy of the user questionnaire completed by Sound Transit is attached in Appendix A.

Parametrix completed an interview with Rob Olsen, Environmental Health Specialist of the Tacoma-Pierce County Health Department Environmental Health – Contaminated Properties division, on February 4, 2021 (TPCHD 2021). Mr. Olsen indicated that ECI Environmental is the consultant on record for the cleanup of the property and that the TPCHD has no record of files or cleanup actions for the site since 2016. Mr. Olsen indicated that ECI Environmental is the consultant for the adjacent property south and similarly has no records for that site since 2016.

7. CONCLUSIONS

Parametrix conducted a Phase I ESA in conformance with the scope and limitations of ASTM Standard Practice E 1527-13. Any exceptions to, or deletions from, the Standard Practice are described in Section 1.3 of this report. Based on the findings of this investigation, Parametrix reached the following conclusions:

- The subject property is located at 704 and 716 Puyallup Avenue in Tacoma, Washington, on Pierce County Parcel Identification numbers 2074280010 and 207428002 (Figure 1). The subject property is currently owned by Amerco Real Estate Company and operated as a parking lot and drive-thru espresso stand. Monitoring wells, boreholes, and 55-gallon hazardous waste storage drums were observed on the subject property during the site reconnaissance.
- The subject property was first developed industrially in the 1890s as a lumber storage yard for the Pacific Lounge and Mattress Company (Carman Manufacturing Company). A dry kiln, sawmill, oil storage, and varnishing warehouse operated on the subject property as part of facility. Later, the western portion was redeveloped into a gasoline station, operating from 1939 through 1961. The subject property has been primarily a storage lot / parking lot from the 1960s through the present, with an espresso stand developed on the eastern portion in 2003.

This assessment has revealed no evidence of RECs in connection with the subject property, except for the following:

Recognized Environmental Conditions

The subject property is listed on the Ecology CSCSL database, Ecology VCP database, ALLSITES database, and EDR Hist Auto database. The listings are related to unresolved historical releases of petroleum hydrocarbons from the prior gas station use as well as potential releases of metals related to the historical sawmill/Carman Manufacturing Company. File reviews performed for the subject property indicate soil and groundwater contamination from the subject property historical gas station release extends into the right-of-way of East G Street (Figure 2).

The extent of the release below the subject property and into the right-of-way does not appear to have been fully characterized. Additionally, historical uses related to the sawmill/Carman facility have not been investigated for potential releases. The historical release on and near the subject property and past use of the property are considered RECs to the subject property.

A REC was identified affecting the subject property related to the neighboring property south, which was listed on several regulatory databases. The Spring Air Northwest/Carman Manufacturing Company site is listed due to a historical release from a heating oil UST. Free product was previously observed below the neighboring site, with contamination migrating north and impacting the subject property. An excavation was performed removing contaminated soils, and a geomembrane was installed to prevent further soil contamination (Figure 2). However, groundwater and potential vapor impacts from the release have not been characterized below the subject property.

Data Gaps

An on-site reconnaissance (within the subject property boundaries) and interview were not conducted with a property representative to identify any potential environmental conditions or to address information data gaps during the Phase I ESA process. The lack of a property owner or representative interview and the lack of a full on-site reconnaissance represent data gaps in accordance with ASTM Standard E1527-13. However, the information obtained for the Phase I ESA, including regulatory database and historical documentation, was deemed sufficient.

PROPERTY HISTORY GUARANTEE

Total Liability Limited to	Fee	Tax
$50,000.00	$350.00	$35.35

Date of Report: February 24, 2021 at 08:00 AM

A. Assured: Central Puget Sound Regional Transit Authority, a regional transit authority

B. The land described in this Guarantee is described as follows:

Lots 1 to 12, Block 7527; and Lots 1 to 12, Block 7428, Tacoma Land Company's First Addition to Tacoma, according to plat filed for record on July 7, 1884, in the office of the County Auditor, in Pierce County, Washington;

Together with all of the alley lying between said Blocks, vacated by Ordinance No. 19338 of the City of Tacoma, recorded May 3, 1971 under Recording No. 2389669, in Pierce County, Washington.

C. At your request, Chicago Title Insurance Company, a Florida corporation has searched the public records of Pierce, Washington, which by law impart constructive notice, for the documents shown below (hereinafter called "the Instruments"):

Deeds, Contracts, Leases

D. At your request, the period of time searched is as follows:

Beginning date: February 24, 1971 at 08:00 AM
Ending date: March 24, 2021 at 08:00 AM

E. The following matters are excluded from the search provided by this guarantee:

1. Unpatented mining claims, and patents
2. Water rights, or claims thereof
3. Instruments, proceedings or other matters which do not specifically describe said land.

This Guarantee is restricted to the use of the Assured. This Guarantee is not a Commitment nor an obligation by the Company to issue any Policy or Policies of Title Insurance insuring said land, and is not to be used as a basis for closing any transaction affecting title to said property.

F. The Instruments as defined in Paragraph C recorded during the period of time searched are:

GENERAL EXCEPTIONS

H. Reservations and exceptions in United States Patents or in Acts authorizing the issuance thereof.

SPECIAL EXCEPTIONS

1. Statutory Warranty Deed:

Grantor: Carman Manufacturing Company, a Washington corporation
Grantee: SPI Properties LLC, a Washington Limited Liability Company
Recorded: November 4, 1998
Recording No.: 9811040541

2. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by the document:

Entitled: Memorandum of Lease
Lessor: SPI Properties LLC
Lessee: Carman Manufacturing Company
Recording Date: November 12, 1998
Recording No.: 9811120562

Assignment and Assumption of Lease:

Assignor: SPI Properties, LLC
Assignee: Han Joe Ro, LLC
Recording Date: January 15, 1999
Recording No.: 9901150670

3. Statutory Warranty Deed:

Grantor: SPI Properties LLC, a Washington Limited Liability Company
Grantee: Han Joe Ro, LLC, a Washington Limited Liability Company
Recorded: January 15, 1999
Recording No.: 9901150666

4. An unrecorded lease with certain terms, covenants, conditions and provisions set forth therein as disclosed by the document:

Entitled: Memorandum of Lease
Lessor: Han Joe Ro, LLC
Lessee: Chami Design, Inc.
Recording Date: January 15, 1999
Recording No.: 9901150675

5. Statutory Warranty Deed:

Grantor: Han Joe Ro, LLC, a Washington Limited Liability Company
Grantee: Landmark Tacoma I LLC, a Washington limited liability company, as to an undivided 50% interest; and Landmark Tacoma II LLC, a Washington limited liability company, as to an undivided 50% interest
Recorded: October 4, 2006
Recording No.: 200610040888

(continued)

6. Statutory Warranty Deed:

Grantor: Landmark Tacoma I LLC, a Washington limited liability company, as to an undivided 50% interest; and Landmark Tacoma II LLC, a Washington limited liability company, as to an undivided 50% interest
Grantee: Amerco Real EState Company, a Nevada corporation
Recorded: April 19, 2018
Recording No.: 201804190151

This map/plat is being furnished as an aid in locating the herein described land in relation to adjoining streets, natural boundaries and other land, and is not a survey of the land depicted. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the company does not insure dimensions, distances, location of easements, acreage or other matters shown thereon.

ASTM 1527-13 USER QUESTIONS

ASTM 1527-13 includes a user questionnaire that must be completed by the user in order to qualify for Landowner Liability Protections (LLPs) under CERCLA. The following questions are to be completed by the user or representatives of the user.

1. Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?
   __No_____
2. Are you aware of any activity and use limitations, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? __ No
   _____
3. As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? __ No
   _____
4. For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? __ No
   _____
5. Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? __I am not aware of the purchase price_____
6. Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? ___ No
   _____

   For example, as user,

   (a) do you know the past uses of the property? __ No
   _____

   (b) do you know of specific chemicals that are present or once were present at the property? __ No
   _____

   (c) do you know of spills or other chemical releases that have taken place at the property? __ No
   _____

   (d) do you know of any environmental cleanups that have taken place at the property? _ No
   _____

7. As the user of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination on the property? ___ No _____

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/29/2020 has revealed that there are 3 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2020 has revealed that there

is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/15/2020 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/15/2020 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 07/13/2020 has revealed that there are 87 WA CSCSL sites within approximately 1 mile of the target property.

WA PTAP: A list of sites accepted into the Petroleum Technical Assistance Program. The Petroleum Technical Assistance Program (PTAP) expands the state's ability to respond to the high customer demand to clean up petroleum contaminated sites. Under the PTAP, the Pollution Liability Insurance Agency (PLIA) may provide informal site-specific technical consultations and issue written opinion letters to persons conducting independent remedial actions at qualifying petroleum cleanup sites. PLIA may provide these services under the authority of RCW 70.149.040(9) and the Model Toxics Control Act (MTCA), Chapter 70.149 RCW and Chapter 173-340 WAC.

A review of the WA PTAP list, as provided by EDR, and dated 05/12/2020 has revealed that there is 1 WA PTAP site within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

WA BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the WA BROWNFIELDS list, as provided by EDR, and dated 07/13/2020 has revealed that there are 2 WA BROWNFIELDS sites within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 07/13/2020 has revealed that there

are 19 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Contaminant Name: Petroleum-Gasoline

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/15/2020 has revealed that there are 14 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

CONSENT: Major Legal settlements that establish responsibility and standards for cleanup at NPL (superfund) sites. Released periodically by U.S. District Courts after settlement by parties to litigation matters.

A review of the CONSENT list, as provided by EDR, and dated 06/30/2020 has revealed that there is 1 CONSENT site within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
TACOMA COAL GASIFICA	A STREET	W 1/4 - 1/2 (0.450 mi.)	AV169	949
TACOMA COAL GASIFICA	E 22ND AND A STS	WNW 1/4 - 1/2 (0.467 mi.)	AR178	1062

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click Here:

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

AIM AEROSPACE TACOMA OPERATIONS (Continued) **1015751726**

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D005
Waste Description: BARIUM

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:
Registry ID: 110005370909

Click Here:

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Longitude:	-122.4305531
HCM Label:	Address Matching-House Number
Map Scale:	-
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Approximately half an acre was turned into a linear park. The remaining portion of the property is pending development of a boat house. Thea-Foss Development Authority is currently working with a citizen's group to raise the funds to build the boathouse. Once built, it will promote canoeing and kayaking on Commencement Bay. Updated 10-22-2015: FWDA will begin public planning for the conversion of the entire site to a park late this fall. Pierce Assessor records shows the property is leased to BIL-JAX Scaffolding business.

Property Description:	Prior to 1955, the site was used for boat building. From 1955 to 1986 it was a plating factory. They specialized in polished copper, nickel and bright chrome finishes. The facility was operation from 1976 to 1986 when operations ceased and the business filed for bankruptcy. The City of Tacoma acquired the property in the late 1980s. In 2002 the buildings on the property was demolished and removed from the site. The site sat vacant ever since.

Map Scale:	-
Point of Reference:	Entrance Point of a Facility or Station
Highlights:	Approximately half an acre was turned into a linear park. The remaining portion of the property is pending development of a boat house. Thea-Foss Development Authority is currently working with a citizen's group to raise the funds to build the boathouse. Once built, it will promote canoeing and kayaking on Commencement Bay. Updated 10-22-2015: FWDA will begin public planning for the conversion of the entire site to a park late this fall. Pierce Assessor records shows the property is leased to BIL-JAX Scaffolding business.

Property Description:	Prior to 1955, the site was used for boat building. From 1955 to 1986 it was a plating factory. They specialized in polished copper, nickel and bright chrome finishes. The facility was operation from 1976 to 1986 when operations ceased and the business filed for bankruptcy. The City of Tacoma acquired the property in the late 1980s. In 2002 the buildings on the property was demolished and removed from the site. The site sat vacant ever since.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

AMERICAN PLATING (Continued) **1000360944**

discharge does not adversely affect water quality.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Hazardous Waste Summary:

Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D008
Waste Description: LEAD

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

Waste Code: F001
Waste Description: THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLORETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air

SUPERVALU INC (Continued) **1004793913**

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: D039
Waste Description: TETRACHLOROETHYLENE

HERITAGE CRYSTAL CLEAN LLC D ST (Continued) **1005445352**

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
HAZARDOUS WASTE BIENNIAL REPORTER

Click Here:

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
OSHA ESTABLISHMENT
HAZARDOUS WASTE BIENNIAL REPORTER
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System:
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste Code: D001
Waste Description: IGNITABLE WASTE

Waste Code: D002
Waste Description: CORROSIVE WASTE

Waste Code: D018
Waste Description: BENZENE

Waste Code: D035
Waste Description: METHYL ETHYL KETONE

Waste Code: F003
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste Code: F005
Waste Description: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
